

TRX Squat

①

ADJUSTMENT: M

BENEFITS:

This simple squat takes some load off the knees by leaning back slightly.

TIP:

Press glutes back on the way down and engage them on the way up.

TRX Single Leg Squat

ADJUSTMENT: M

BENEFITS:

Allows for greater range of motion by utilizing the TRX for balance.

TIP:

Keep heel on ground for full leg and glute activation.

TRX Single Leg Squat

(with Hop)

ADJUSTMENT: M

BENEFITS:

Strengthens lower body while improving unilateral movement, stability and power.

TIP:

Open chest and keep back straight so as to avoid any leaning or rounding forward.

TRX Assisted Lunge

(aka Split Squat)

ADJUSTMENT: M

BENEFITS:

Initial progression allows body to stay centered and build lower body strength.

TIP:

Keep shoulders stacked over hips and core engaged while driving through legs and hips.

TRX Step Side Lunge

ADJUSTMENT: M

BENEFITS:

Targets hip abductors and adductors while developing strength for lateral movement.

TIP:

Use TRX to unload the movement and permit greater range of motion to stretch inner thighs.

TRX Step Back Lunge

ADJUSTMENT: M

BENEFITS:

Progression to increase single leg balance and strength.

TIP:

Keep chin lifted, open chest and avoid rounding forward.

TRX Balance Lunge ②

ADJUSTMENT: M

BENEFITS:

Keeping the foot lifted while lunging helps to challenge core stability and develops unilateral leg strength and stability.

TIP:

Keep heel on ground and knee over ankle and drive movement from hip.

TRX Balance Lunge

(with Hop)

ADJUSTMENT: M

BENEFITS:

Strengthens unilateral lower body movement, stability and power.

TIP:

Lunge back after each hop.

TRX Crossing Balance Lunge

ADJUSTMENT: M

BENEFITS:

This TRX move offers greater range of motion in unilateral leg training because a percentage of bodyweight is unloaded onto the TRX.

TIP:

Cross knee behind grounded leg and let pelvis drop to increase demand on outside of hip.

TRX Abducted Balance Lunge

ADJUSTMENT: M

BENEFITS:

Holding leg out to the side strengthens core, hips abductors and adductors.

TIP:

Apply tension on handles to stay centered.

TRX Lunge

ADJUSTMENT: MC

BENEFITS:

A hands-free lunge that challenges unilateral leg strength and core stabilization.

TIP:

Keep heel on the ground and fully engage leg and glutes.

TRX Lunge

(with Hop)

ADJUSTMENT: MC

BENEFITS:

A hands-free lunge that challenges unilateral leg power.

TIP:

Lunge after each hop.

TRX Crossing Lunge

ADJUSTMENT: MC

BENEFITS:

The "cross back" part of this lunge challenges the hip's rotational movement strength and increases hip mobility.

TIP:

Cross leg back by opening and rotating hips as far back as possible.

TRX Abducted Lunge

ADJUSTMENT: MC

BENEFITS:

Suspending the leg out to the side strengthens core, hips, abductors and adductors.

TIP:

Lift chin and open chest to maintain a straight back while lunging.

TRX Hamstring Curl

(Hips Grounded)

ADJUSTMENT: MC

BENEFITS:

Strengthens hamstrings, hips, glutes and core.

TIP:

Bring heels toward glutes and maintain even pressure on the foot cradles to fully engage the hamstrings.

TRX Hamstring Curl

(Hips Lifted)

ADJUSTMENT: MC

BENEFITS:

Lifting hips adds resistance strengthens back extensors and increases strength and stability challenges to lower body and core.

TIP:

Keep feet flexed toward shins to maximize movement.

TRX Hamstring Runner

ADJUSTMENT: MC

BENEFITS:

Strengthens hamstrings, hips, glutes, back extensors and overall core.

TIP:

Press heels evenly into foot cradles and simulate a marching movement to fully engage targeted muscles.

TRX Hip Press

ADJUSTMENT: MC

BENEFITS:

This core move targets hamstrings and activates glutes and back extensors.

TIP:

Maintain the same knee angle from start to finish.

TRX Hip Abduction

ADJUSTMENT: MC

BENEFITS:

Actively stretches inner thigh and strengthens core and shoulders at same time.

TIP:

Separate legs as far as possible without raising hips up.

TRX Standing Hip Extension

ADJUSTMENT: MC

BENEFITS:

Stretches and strengthens hamstrings and hip flexors.

TIP:

Travel slowly and avoid momentum so muscles stretch gradually.

TRX Leg Extension

ADJUSTMENT: MC

BENEFITS:

Integrates core and quadriceps strength with hip stability.

TIP:

Maintain a 90 degree angle at the hip while extending and flexing the knee.

TRX Chest Press ③

ADJUSTMENT: L

BENEFITS:

Strengthens chest, triceps, shoulders and core.

TIP:

Keep hands high enough to prevent the straps from rubbing against arms during the exercise.

TRX Chest Press

(Single Leg)

ADJUSTMENT: L

BENEFITS:

Adds additional core stability challenge.

TIP:

Keep hips extended by contracting glutes and keep shoulders pulled down and back to maintain body alignment.

TRX Chest Press

(Single Leg Abducted)

ADJUSTMENT: L

BENEFITS:

Lifting one foot and maintaining body alignment improves core stability.

TIP:

Keep hips extended by contracting glutes and keep shoulders pulled down and back to maintain body alignment.

TRX Chest Press

(Single Arm)

ADJUSTMENT: L

BENEFITS:

Strengthens core, chest and shoulders and can be used to build up to a single arm push-up.

TIP:

Keep feet wide or in an offset stance to maximize stability.

TRX Chest Press

(Inside Grip)

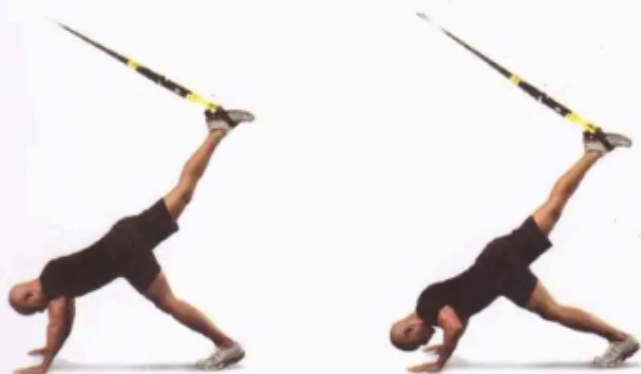

ADJUSTMENT: L

BENEFITS:

This close grip variation strengthens different areas of the chest, triceps and shoulders as compared to a typical chest press and push-ups.

TIP:

Adjust arms to avoid having the straps rub against the insides of the arms.

TRX Incline Press

(Leg Down)

ADJUSTMENT: MC

BENEFITS:

Strengthens the shoulders, arms and core in a challenging position.

TIP:

Try different positions of the down leg to find the appropriate challenge.

TRX Incline Press

(Leg Up)

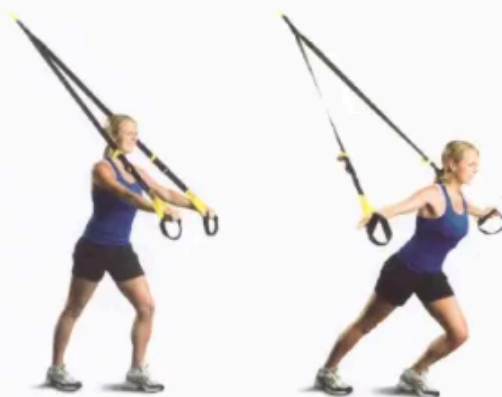

ADJUSTMENT: MC

BENEFITS:

Strengthens the shoulders, arms and core, requiring exceptional balance and control.

TIP:

Master the leg down version of the exercise before attempting this advanced progression.

TRX Chest Fly

(Offset Stance)

ADJUSTMENT: L

BENEFITS:

Using the offset stance loads the movement appropriately to train with a full range of motion in chest and shoulders.

TIP:

Increase resistance in the offset stance by bringing front foot towards the rear foot, reducing the base of support.

TRX Push-Up

ADJUSTMENT: MC

BENEFITS:

The suspended environment strengthens and integrates stability and mobility of the push-up.

TIP:

Keep the tailbone lifted and core engaged to maintain body alignment and avoid dropping or sagging in the back and hips.

TRX Atomic Push-Up

ADJUSTMENT: MC

BENEFITS:

This combination is a high intensity full body exercise.

TIP:

Drive tailbone up and bring knees into chest.

TRX Oblique Atomic Push-Up

ADJUSTMENT: MC

BENEFITS:

This variation of the Atomic Push-up adds a rotational move that strengthens the obliques.

TIP:

Bring knees all the way up to elbows while alternating sides.

TRX High Row

ADJUSTMENT: S

BENEFITS:

Strengthens upper back, biceps and shoulders.

TIP:

Keep chest lifted to finish the row with a tall posture and no rounding in back.

⑤ TRX Mid Row

ADJUSTMENT: S

BENEFITS:

Strengthens back muscles in a different position than the "high" or "low" row versions for complete strength development.

TIP:

Draw shoulder blades in close together without shrugging shoulders.

TRX Low Row

ADJUSTMENT: S

BENEFITS:

Strengthens back and arms in their strongest pulling position.

TIP:

Start in a deep body angle and initiate the pull with back, not arms.

TRX Mid Row (Single Arm)

ADJUSTMENT: S

BENEFITS:

Strengthens back, shoulders, arms and core while resisting rotational forces.

TIP:

Keep shoulders square to the anchor point.

TRX Power Pull

ADJUSTMENT: M

BENEFITS:

This move provides a large range of motion that integrates back and core rotational strength and control.

TIP:

Drive the movement from back and core without turning it into an arm dominant exercise.

TRX Low Deltoid Fly

ADJUSTMENT: M

BENEFITS:

This move provides a large range of motion that integrates shoulder, back and core strength.

TIP:

Drive the movement from back and core without turning it into an arm dominant exercise.

11 TRX T Deltoid Fly

ADJUSTMENT: M

BENEFITS:

Builds strength and stability in rear shoulders and upper back.

TIP:

Maintain the same elbow angle from start to finish.

Upper Body Exercises

TRX Y Deltoid Fly

ADJUSTMENT: M

BENEFITS:

Builds strength and stability in the rear and middle parts of the shoulders.

TIP:

Keep an even amount of tension on the TRX, especially at the top of the movement.

TRX I Deltoid Fly

ADJUSTMENT: M

BENEFITS:

Builds strength and stability in the front and middle parts of the shoulders.

TIP:

Draw shoulder blades down to avoid shrugging shoulders, especially at the top of the movement.

TRX L Deltoid Fly

ADJUSTMENT: M

BENEFITS:

Strengthens external rotators with some stabilization support from the lats, biceps and forearms.

TIP:

Keep elbows close to sides when pulling in toward the center.

TRX W Deltoid Fly

ADJUSTMENT: M

BENEFITS:

Strengthens external rotators.

TIP:

Keep elbows close to sides when pulling in toward the center.

TRX Split Deltoid Fly

ADJUSTMENT: M

BENEFITS:

Strengthens shoulders and lats and develops shoulder stabilization.

TIP:

Keep core engaged and do not lead with hips.

TRX Triceps Press

(Offset Stance)

ADJUSTMENT: M

BENEFITS:

Strengthens triceps and requires total body stability.

TIP:

Keep elbows shoulder width apart and point them straight ahead.

Upper Body Exercises

TRX Triceps Kick Back *(Offset Stance, Supinated Grip)*

ADJUSTMENT: M

BENEFITS:

Strengthens triceps and challenges core stabilization.

TIP:

Keep upper arms close to sides.

TRX Triceps Extension *(Supinated Grip)*

ADJUSTMENT: MC

BENEFITS:

Strengthens triceps and helps develop shoulder and elbow stability.

TIP:

Keep core activated and back straight.

⑦ TRX Biceps Curl

ADJUSTMENT: M

BENEFITS:

Strengthens biceps, forearms and postural muscles.

TIP:

Keep elbows raised so they are in line with shoulders.

TRX Biceps Curl

(Pronated Grip)

ADJUSTMENT: M

BENEFITS:

Strengthens biceps, forearms and postural muscles.

TIP:

Keep elbows close together and raised so they are in line with shoulders.

TRX Biceps Clutch

ADJUSTMENT: M

BENEFITS:

A variation of the biceps curl that trains biceps, forearms and postural muscles.

TIP:

Keep elbows raised to shoulder height.

TRX Biceps Curl

(Single Arm)

ADJUSTMENT: M

BENEFITS:

Develops unilateral strength in the biceps and forearms and places demands on the core's rotational stability.

TIP:

Keep elbows raised to shoulder height and pointed to each side.

4

TRX Overhead Back Extension

ADJUSTMENT: M

BENEFITS:

Integrates hip, back and shoulder strength.

TIP:

Keep arms close to ears and engage the back muscles at the top of the movement.

TRX Torso Rotation

ADJUSTMENT: M

BENEFITS:

A great athletic movement that strengthens internal and external obliques.

TIP:

Drive the movement from back and core without turning it into an arm dominant exercise.

10

TRX Standing Hip Drop

ADJUSTMENT: M

BENEFITS:

Strengthens obliques and increases hip mobility, while placing demands on core stabilization.

TIP:

Keep chest and hips facing the same direction to keep from twisting out of alignment.

TRX Overhead Squat

ADJUSTMENT: M

BENEFITS:

An intense move that strengthens postural muscles, lower body and core.

TIP:

Keep back muscles engaged by pulling back overhead on the handles.

TRX Standing Roll Out

ADJUSTMENT: M

BENEFITS:

Activates abdominal and core stabilization muscles.

TIP:

Keep body aligned and core engaged by tucking tailbone in and pulling navel toward spine.

⑥ TRX Kneeling Roll Out

ADJUSTMENT: MC

BENEFITS:

Shortening the body's length by kneeling decreases the challenge and can serve as a first step toward the TRX Standing Roll Out.

TIP:

Move slowly and with control so that all core muscles can fully engage and develop strength.

TRX Kneeling Oblique Roll Out

ADJUSTMENT: MC

BENEFITS:

Strengthens obliques and activates core stabilization.

TIP:

Keep shoulders square to anchor point with hips to one side while keeping elbows straight to achieve full range of motion.

TRX Assisted Sit-Up

ADJUSTMENT: MC

BENEFITS:

Use the TRX handles for assistance to achieve the maximum range of motion in the sit-up.

TIP:

Return to start position slowly to activate core muscles.

TRX Bent Leg Raise

(Single Leg)

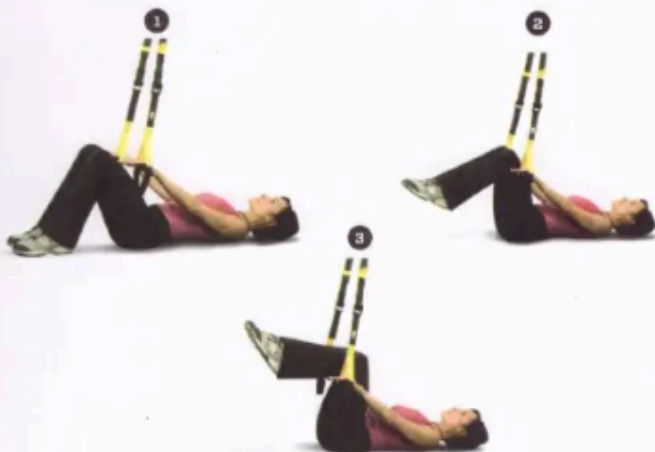

ADJUSTMENT: MC

BENEFITS:

Facilitates core strength and stability to allow unilateral hip mobility.

TIP:

Keep torso and hips still as leg moves up and down.

TRX Bent Leg Raise

ADJUSTMENT: MC

BENEFITS:

Promotes core stability integrated with hip movement.

TIP:

Lower legs to approximately 12 inches off ground.

TRX Oblique Leg Raise

ADJUSTMENT: MC

BENEFITS:

Builds core stability and rotational strength in the abdominals and external and internal obliques.

TIP:

Make sure hips, knees and feet stay aligned to get the most out of core strength development.

TRX Supine Runner

ADJUSTMENT: MC

BENEFITS:

Facilitates core strength and stability to allow alternating hip mobility.

TIP:

Press down firmly on handles so core remains engaged.

Core Exercises

TRX Sit-Up

ADJUSTMENT: MC

BENEFITS:

Pressing down into the foot cradles provides better core strength development.

TIP:

Drive heels straight down into foot cradles for full muscle activation from beginning to finish.

TRX Resisted Sit-Up

ADJUSTMENT: MC

BENEFITS:

For maximum core activation, press on handles evenly and avoid using momentum to sit up.

TIP:

Pressing down on the TRX handles activates core more than in a regular floor sit up.

TRX Plank

(on Elbows)

ADJUSTMENT: MC

BENEFITS:

Challenges the entire core and develops upper body stability and strength.

TIP:

Keep tailbone lifted and core engaged to maintain body alignment and avoid sagging in back and hips.

TRX Plank

(on Hands)

ADJUSTMENT: MC

BENEFITS:

Builds strength and endurance in the shoulders and core.

TIP:

Keep shoulders pulled back and core engaged to keep back from sagging.

TRX Plank

(Single Leg)

ADJUSTMENT: MC

BENEFITS:

Strengthens core and hips to resist rotational forces.

TIP:

Keep hips level. Do not let floating side drop.

TRX Plank

(Single Leg/Arm)

ADJUSTMENT: MC

BENEFITS:

The most challenging in the series uses one arm and one leg to maintain total body stability.

TIP:

Keep hips and shoulders square and facing the ground to stay in alignment.

TRX Supine Plank

(on Elbows)

ADJUSTMENT: MC

BENEFITS:

Increases flexibility in the anterior shoulder and builds strength and stability in the upper body.

TIP:

Keep chin off chest looking directly up and maintain stability without flexing at the hip. Direct hips up away from ground.

TRX Supine Plank

(on Hands)

ADJUSTMENT: MC

BENEFITS:

Increases shoulder and back flexibility, strength and stability.

TIP:

Maintain proper body position by keeping shoulder, elbows and wrist in vertical alignment. Keep hips and chest lifted to maintain a horizontal body alignment.

TRX Supine Plank

(with Pull Through)

ADJUSTMENT: MC

BENEFITS:

Strengthens abdominals and core and improves mobility of shoulders and hamstrings.

TIP:

Contract abdominals and lift hips slightly for a deep tuck.

TRX Crunch

(on Elbows)

ADJUSTMENT: MC

BENEFITS:

Strengthens core and lower body with a cardiovascular challenge as tempo and repetitions increase.

TIP:

Contract abdominals and lift hips slightly for a full knee tuck.

TRX Crunch

(on Hands)

ADJUSTMENT: MC

BENEFITS:

Strengthens core and lower body with a cardiovascular challenge as tempo and reps increase. Increased stability challenge makes moves more intense.

TIP:

Contract abdominals and lift hips slightly for a deep knee tuck.

TRX Oblique Crunch

ADJUSTMENT: MC

BENEFITS:

Integrates chest and shoulder stability with dynamic core movement.

TIP:

Move in a controlled manner when drawing knees toward elbows to fully engage core.

TRX Pike

ADJUSTMENT: MC

BENEFITS:

This intense move requires upper body and core stabilization to strengthen abdominals and shoulders.

TIP:

Keep pike strong by activating quadriceps and avoiding bending knees.

TRX Mountain Climber

ADJUSTMENT: MC

BENEFITS:

Integrates core strength with hip mobility.

TIP:

Keep even tension on each of the foot cradles.

TRX Pendulum

ADJUSTMENT: MC

BENEFITS:

A dynamic movement that requires overall core stabilization with extra focus on the obliques.

TIP:

Build challenging amplitude but maintain control by keeping core engaged.

TRX Body Saw

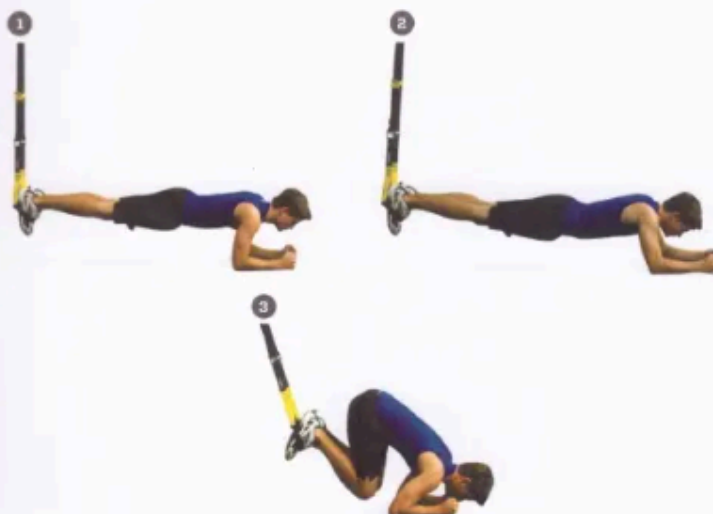

ADJUSTMENT: MC

BENEFITS:

Integrates core stability with shoulder strength and mobility.

TIP:

Maintain body alignment and keep shoulders pulled back and down throughout the movement.

TRX Body Saw

(with Crunch)

ADJUSTMENT: MC

BENEFITS:

Adding crunch intensifies core work.

TIP:

Tuck knees in close to chest by lifting hips slightly for every rep.

TRX Side Plank

(Top Arm Assist)

ADJUSTMENT: MC

BENEFITS:

Arm assistance is a great way to begin building strength for this posture and its progressions.

TIP:

Keep bottom elbow directly under shoulder and maintain alignment.

TRX Side Plank

(on Elbow)

ADJUSTMENT: MC

BENEFITS:

Huge demands placed on oblique strength and core stabilization.

TIP:

Keep elbow directly under shoulder and maintain body alignment.

TRX Side Plank

(with Hip Drop)

ADJUSTMENT: MC

BENEFITS:

Dropping hips actively recruits oblique strength and increases core stabilization demands.

TIP:

Keep core and legs activated at all times to avoid involuntary leg swinging.

TRX Side Plank

(with Reach)

ADJUSTMENT: MC

BENEFITS:

Requires complete core muscular coordination and tremendous core strength, especially from the lower abdominals and obliques.

TIP:

Keep hips lifted with each reach.

TRX Side Plank

(on Hand)

ADJUSTMENT: MC

BENEFITS:

Performing this posture from the hand adds a greater stability and intensity challenge, compared to elbow progression.

TIP:

Keep bottom shoulder pulled down and back throughout the entire exercise.

TRX Chest Stretch

ADJUSTMENT: M

BENEFITS:

Improves posture by stretching chest, shoulders and hips.

TIP:

To intensify stretch, take a longer step or position body further away from anchor point.

TRX Chest and Torso Stretch

ADJUSTMENT: M

BENEFITS:

Improves flexibility of chest, back, lats, shoulders and hips.

TIP:

To intensify stretch, take longer step or position body further away from anchor point.

TRX Lower Back Stretch

ADJUSTMENT: M

BENEFITS:

Increases flexibility in lower back and hamstrings

TIP:

Breathe deeply and slowly to increase relaxation and allow spinal traction.

TRX Lower Back Stretch

(with Rotation)

ADJUSTMENT: M

BENEFITS:

Increases flexibility in lower back and hamstrings. Improves upper back mobility.

TIP:

To increase intensity of stretch, lift toes of straight leg throughout rotation.

TRX Hip Hinge

(Wide Stance)

ADJUSTMENT: M

BENEFITS:

Increases hip mobility and reduces strain on hips and lower back by stretching inner thighs.

TIP:

To reduce intensity, move feet closer together and/or further from anchor point. To intensify stretch, widen stance and/or move feet closer to anchor point.

TRX Hip Hinge

(Offset Stance)

ADJUSTMENT: M

BENEFITS:

Increases flexibility of back and hamstrings.

TIP:

Keep toes pointing forward, hinge at hips, keep back flat and drop head between arms.

TRX Upper Back Stretch

ADJUSTMENT: M

BENEFITS:

Increases flexibility in upper back.

TIP:

Add some slow forward head drops to increase upper back stretch through to neck.

TRX Long Torso Twist

ADJUSTMENT: M

BENEFITS:

Increases flexibility of torso, hips and back.

TIP:

Move within this stretch and experiment with angles to find tight points.

TRX Seated Figure-Four Stretch

ADJUSTMENT: M

BENEFITS:

Increases flexibility in hips, glutes and hamstrings. Strengthens upper back.

TIP:

For increased stretch, pull toes of grounded foot toward shin.

TRX Standing Figure-Four Stretch

ADJUSTMENT: M

BENEFITS:

Increases flexibility in lower back, hips, glutes and hamstrings. Strengthens upper back.

TIP:

For increased stretch, drop hips toward floor and keep upper body lengthened.

TRX Neck Stretch

ADJUSTMENT: M

BENEFITS:

Reduces stress in shoulder and neck.

TIP:

To enhance stretch, tilt head and slowly move chin. Feel the stretch move across the muscles of the shoulders and neck.
